This map illustrates the relative spatial density of damaged structures in the city of Malakal, South Sudan as identified in satellite imagery from 18 January and 15 March 2014. UNOSAT identified a total of 10,082 destroyed structures throughout the area analyzed. The majority of damaged sites occurred in the southwest and central areas of the city, as well as along the principal eastern road. This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR / UNOSAT.
