Landslides/Mudflow Assessment in Mbale District, Eastern Region, Uganda

This map illustrates satellite-detected landslide at Bukalasi and surrounding areas located close to Mount Elgon in Manjia District, Eastern Region, Uganda, as seen on Pleiades-1 satellite imagery with 0.5m resolution, collected on 13 October 2018. The analysis of the image shows that landslides and overflowed waters/mud seem to have hit Bukalasi along the stream and have potentially affected several houses and also caused cut of roads. This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR - UNOSAT.

Legend
- Settlement
- Road
- Potentially affected road
- Parish boundary
- Landslide/Mudflow extent [13 October 2018]
- Satellite-detected water [13 October 2018]
