Estimation of precipitation accumulation from Cyclone Megh for Socotra Island in Yemen and the northern part of Bari and Sanaag regions in Somalia, covering the period from 06 November 2015 to 09 November 2015 9h UTC. This total estimate was derived from the Global Precipitation Measurement IMERG dataset (Integrated Multi-satellite Retrievals for GPM); it is possible that precipitation levels may have been underestimated for local areas and are not a substitute for ground station measurements.
