This map illustrates satellite-detected damage and destruction in the Chitral area of Khyber Pakhtunkhwa Province, Pakistan, and located roughly 120 km southwest of the 26 October 2015 earthquake epicenter. Using a Pleiades satellite image acquired 31 October 2015 and a WorldView-2 image acquired 12 August 2015, UNITAR-UNOSAT identified 389 potentially damaged structures. Some areas could not be analyzed because of cloud cover on the reference image. This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR - UNOSAT.

**Legend**
- Settlement
- Possible Damage
- Airport
- Highway / Primary Road
- Secondary / Local Road
- Cloud/Occultation
- Analysis Extent
