UPDATE 2: FLOOD WATERS OVER THE AFFECTED AREAS
OF SOUTHERN ANGOLA - 25 MARCH 2008

The map illustrates satellite-detected flood waters as of 25 March 2008 over the affected area of southern Angola. Data presented on the map was obtained from the Flood Analysis with DMC data recorded 20 March 2008 at a spatial resolution of 25 meters. Differences in the Flood Analysis results reflect differences in methodology and data quality. This information is preliminary analysis and has not been validated by the field.

**Commune**

- Ombala Yo Mungo
- Onjiva
- Nauli
- Mongua
- Namakunde
- Xangongo

**Area (km²)**

- 511
- 500
- 427
- 299
- 234
- 216

**Note:** Areas of less than one square kilometer are not presented as flood pixels were too insensitive to detect very local phenomena. The Commune of Kunene, therefore, is presented as possible flood risk, but this should be confirmed before action is taken.

**Legend**

- International Border
- Municipal Boundary
- Commune Boundary
- Main Road
- Track / Trail
- Railway
- Village / Town
- Drainage Line
- Flood Area
- Settlement
