This map illustrates affected mining areas in the Galangan site and Katingan catchment area in Central Kalimantan Province, Indonesia. It is derived from Landsat-7 and Landsat-8 multispectral imagery acquired on 26 May 2002 and 24 September 2014 respectively at 30 meter pixel resolution. Affected mining areas are comprised of the exposed sands/mining and affected waters/mining pits land cover classes. The inset table summarizes the total affected mining area as of 26 May 2002 and 24 September 2014 within the region analyzed. This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR - UNOSAT.
