Description
This map illustrates the suspected fire-damaged locations around the city of Eldoret, Uasin Gishu District, Rift Valley Province, following the national elections on 27 December 2007. These burn areas were identified using Formosat-2 satellite imagery, acquired on 8 January 2008. Additional information was used on selected fire location from the MODIS Aqua and Terra satellites covering the time period of 27 December to 2 January 2008.

Please note that this fire analysis cannot discriminate between normally occurring fires and those resulting from arson or conflict, and therefore contains a large degree of uncertainty as to the causes.

The depiction and use of boundaries, geographic names and related data shown here are not warranted to be error-free nor do they imply official endorsement or acceptance by the United Nations. This map was produced by the United Nations Institute for Training and Research (UNITAR) Operational Satellite Applications Programme (UNOSAT). UNOSAT provides satellite imagery and related geographic information to UN humanitarian and development agencies and their implementing partners.
