This map illustrates satellite-derived transportation data (roads, air field, bridges and potential road obstacles) over the complex of three refugee camps surrounding the village of Dadaab, North-Eastern, Kenya as identified from WorldView-1 satellite imagery recorded on 9 March 2009. Transportation data layers were created and attributed according to the UN Spatial Data Infrastructure for Transport (UNSDIT) database structure, and will continue to be updated by UNOSAT as new satellite imagery becomes available.
