The poster-sized map provides an overview of the operational status of the military airport in Tripoli. It is based on an analysis of satellite imagery collected on 26 February and 28 March 2011. Although there are no visible damages to airport building facilities, flight traffic is currently blocked by multiple unidentified obstructions placed deliberately along the runway and nearby taxi lanes between 26 February and 28 March. A total of seven runway obstructions were identified, four along the runway and two along the taxi lanes. All identified obstruction sites are marked on the map and two focus insets are provided to illustrate the range of obstruction types used. This was produced by UNITAR/UNOSAT in support of international humanitarian assistance to the people of Libya. The map is created in response to the needs of UN agencies and their partners. It is intended to provide objective geographic information and has been designed for easy printing and readability for A0 and A1 posters.

**Map Legend**

- **Obstruction**: Runway Obstacle
- **Civil Conflict**: Runway Obstruction by type

**Focus Images**: Runway Obstructions by type
