This map illustrates satellite-detected areas of flood as seen in Sentinel-1 imagery acquired on 11 August 2015 in northern Sindh province, Pakistan. There is significant flooding along the Indus river banks in Ghotki, Sukkur, Shikarpur, Larkana and Khairpur. In the analyzed area about 350,000 hectares of land were found to be flooded. It is likely that flood waters have been systematically underestimated along highly vegetated areas along main river banks and within built-up urban areas because of the special characteristics of the satellite data used. The analysis has not yet been validated and field teams should send ground feedback to UNITAR-UNOSAT.
