This map illustrates the floods (cumulative) aggregated using NOAA20-VIIRS in the southern part of Chad between the 20th & the 26th of August 2020. The most exposed prefectures are mainly located in Salamat, Tandjile and Batha departments. Within the analyzed area of about 540,000 km², a total of about 19,000 km² of lands appear to be flooded. Based on WorldPop population data and the detected surface waters, about 450,000 people are potentially exposed or living close to flooded areas. This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR - UNOSAT.
