MAP DESCRIPTION:
This assessment of the Buramino refugee camp in the Dolo Ado area of Ethiopia, is based on a quantitative analysis of satellite imagery acquired on 23 January 2012. Buramino is a new camp opened on the 30 November 2011 to relieve congestion at a transition center in the region. A total of 1,507 tent structures were identified within the camp site encompassing a current area of approximately 807m². This shelter count was obtained using an automated shelter detection computer model with a high degree of confidence and reviewed manually for accuracy with standard image interpretation methods. There are several hundred additional buildings and structures not marked which are likely to be camp management facilities (i.e. medical clinics, latrines, administration, etc.). This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR / UNOSAT.
